Contents

1. 1. Welcome to Giga3 AI
2. 2. Installing the PWA
3. 3. Accounts, sessions & navigation
4. 4. Chat platform & dual backend
5. 5. Model tiers: Fast, Smart, Vision, Creator
6. 6. Themes, accessibility & voice
7. 7. Offline habits that stick
8. 8. Workspaces map
9. 9. Credits, subscriptions & fair use
10. 10. Series 1 checklist

Part of the four-volume Giga3 Creator Academy. Each series is sold separately at GHS 150.00.

1. Welcome to Giga3 AI

Giga3 AI is a progressive web app (PWA) for creators in Ghana and beyond. Open <https://www.giga3ai.com> in a modern browser (Chrome, Safari, Edge, or Samsung Internet). The product combines AI chat, Media Studio, GigaEdit, GigaSocial, GigaLearn, and a digital marketplace — one shell, multiple creator workspaces.

This Series 1 handbook is the official foundation volume of the Giga3 Creator Academy. Each Academy series is sold separately at GHS 150.00. Complete all four series for the full platform curriculum.

2. Installing the PWA

On Android Chrome: open the site → browser menu → Install app / Add to Home screen. On iOS Safari: Share → Add to Home Screen. On desktop Chrome/Edge: use the install icon in the address bar.

Once installed, Giga3 launches in a standalone window with its own icon. The service worker caches the marketing shell and key offline routes so the app opens even when the network is slow. After major releases, hard-refresh or clear the PWA cache so you receive the latest shell (cache names follow giga3-shell-v*). Never rely on a stale service worker when debugging UI issues.

3. Accounts, sessions & navigation

Sign in from Chat login. Your session token unlocks chat history, purchases, creator tools, and GigaSocial. The workspace rail surfaces GigaSocial, GigaEdit, GigaLearn, Media, Marketplace, and more. Marketing pages use a stable layout (marketing-stable) designed to avoid mobile GPU tearing; chat uses chat-stable to prevent scroll jitter.

Bookmark <https://www.giga3ai.com/chat/> for conversation, <https://www.giga3ai.com/marketplace/> for digital products, and <https://www.giga3ai.com/gigaedit/> for the editor. Deep links such as `/media?source=...` open Image Studio in edit mode when a source image is provided.

4. Chat platform & dual backend

Default data backend is Convex (`NEXT_PUBLIC_GIGA3_DATA_BACKEND=convex`): chat history and AI orchestration live there. An optional Supabase mode stores chat history in Supabase while AI send/reply still goes through Convex HTTP (`chatMessaging:acceptMessage`). Billing, media jobs, and Paystack always remain on Convex.

On slow mobile networks, the client uses shared timings in `chatNetwork` plus resilient hooks (`useChatPlatform` / `useSupabaseChatPlatform`). Prefer stable Wi-Fi when uploading large media; text chat is optimized for intermittent connections.

5. Model tiers: Fast, Smart, Vision, Creator

Giga3 exposes approachable model tiers that map to existing Convex mode IDs (see `gigaModels`). Fast prioritizes quick replies; Smart balances depth; Vision understands images; Creator is tuned for long-form and production workflows. Choosing a tier changes cost in credits and response style — match the tier to the job (brainstorm vs caption vs script vs lesson plan).

Interest profiling may batch every few messages to personalize suggestions without writing the database on every keystroke. Credits are queried via dedicated chat credit APIs so the composer stays light.

6. Themes, accessibility & voice

ThemeProvider applies light/dark via a `dark` class on `<html>` — chat does not hardcode a single theme. Prefer readable contrast for long sessions. Voice dictation uses the browser SpeechRecognition API where available; the site headers allow `microphone=(self)`. Speak clearly, pause between sentences, and review dictated text before sending.

Pull-to-refresh is disabled on chat to protect scroll position. Use normal navigation or a hard refresh when you need a clean load.

7. Offline habits that stick

The PWA precaches public shell routes (home, offline page, icons, pricing, login, GigaEdit entry). Authenticated surfaces are not blindly cached. When offline, open the installed app → Offline page for guidance. Draft text locally before sending; large media jobs require connectivity.

Creator tip: install the PWA before traveling, keep Series PDFs in My purchases for offline reading after download, and finish GigaEdit exports while online so publish handoff can complete.

8. Workspaces map

Giga3 workspaces (typical order): GigaSocial (community), GigaEdit (production), GigaLearn (lessons), Media Studio (generation), Marketplace (sell/buy), Chat (AI companion). Treat Chat as your always-on strategist; treat GigaEdit + GigaSocial as the public stage; treat Marketplace as the storefront.

Render probes (`?renderProbe=1`) help engineers diagnose chat re-render storms — creators can ignore them unless support asks for console snapshots.

9. Credits, subscriptions & fair use

Chat and media jobs consume credits or subscription entitlements configured on Convex. Credit packs and plans are priced in GHS via Paystack. Check balance before batch image/video runs. If a job fails after debit policies differ by product — retry once, then contact support with the approximate time and feature used.

Starter credits may apply for new accounts. Do not share login sessions across devices in ways that confuse purchase ownership.

10. Series 1 checklist

- ☐ Install Giga3 as a PWA on your primary phone
- ☐ Sign in and send a test chat on Fast and Smart
- ☐ Toggle theme and confirm the shell remains readable
- ☐ Open Marketplace, GigaEdit, and GigaSocial from the workspace
- ☐ Note your credit balance before a long Creator session
- ☐ Hard-refresh after any announced production deploy

Next: Series 2 — Create & Publish covers Media Studio, GigaEdit, cameras, and export to GigaSocial (GHS 150.00).
