Contents

1. 1. The creator production loop
2. 2. Media Studio fundamentals
3. 3. GigaEdit workspace
4. 4. Cameras, teleprompter & voice-follow
5. 5. Export & publish handoff
6. 6. Quality bar for professional creators
7. 7. Image & video provider reality
8. 8. Asset hygiene
9. 9. Series 2 checklist

Part of the four-volume Giga3 Creator Academy. Each series is sold separately at GHS 150.00.

1. The creator production loop

Series 2 documents the Giga3 make → refine → publish loop. Generate or capture media, refine in GigaEdit, then hand off to GigaSocial. Official Academy price for this volume: GHS 150.00. Production site: <https://www.giga3ai.com>.

2. Media Studio fundamentals

Media Studio queues generation jobs and shows recent generations for polling — keep job watching in RecentGenerationsSection while the form lives in MediaGeneratePanel. Root layout uses min-h-full (avoid nested dvh traps). Image generation failover order is fal.ai → Replicate → Google AI Studio (GEMINI_API_KEY). Imagen-style generation and Gemini edit-with-source power backup paths when a source image URL is present (?source=).

Write prompts with subject, setting, lighting, and aspect intent. Save strong outputs immediately; treat Studio as a sketchpad and GigaEdit as the finishing room.

3. GigaEdit workspace

GigaEdit is the full editor for photos and video: studio tabs, templates, social seeds, audio attach, teleprompter, and project deep links (?project= / ?aspect=). Photo aspect crop runs through the media pipeline; video bake export produces a publishable file before social handoff.

Workspace shortcut order prioritizes GigaSocial → GigaEdit → GigaLearn so creators reach production tools first. Prefer device-tier camera previews; offline background sync can flush queued work when connectivity returns.

4. Cameras, teleprompter & voice-follow

Use the pro-style camera preview for talking-head and product shots. Stabilize the phone, light the face from the front, and keep backgrounds simple. Teleprompter + voice-follow helps scripted videos — rehearse once, then record. Attach Audio Studio takes when narration needs a separate track.

Avoid starting publish until export finishes. If a previous handoff failed, confirm IndexedDB commit completed before navigating away.

5. Export & publish handoff

“Post to GigaSocial” stages the handoff then opens the feed composer with your baked media. Video export should complete audio extraction without hanging on seeked events; if a bake stalls, retry export before leaving GigaEdit.

After handoff, review caption, hashtags, and visibility in the composer. You can still edit metadata on GigaSocial before posting. Keep a local copy of hero assets for thumbnails and marketplace covers.

6. Quality bar for professional creators

- ☐ Vertical video framed for mobile-first feeds
- ☐ Readable captions burned or attached as text
- ☐ Consistent color grade across a series of posts
- ☐ Export resolution matched to platform norms
- ☐ Cover stills for marketplace and link previews
- ☐ No unfinished drafts published “to test” on main account — use a secondary profile when experimenting (Series 3)

7. Image & video provider reality

Providers fail. Giga3’s failover (fal → Replicate → Google AI Studio) exists so a single outage does not stop your shoot day. When output style shifts between providers, re-run with a tighter prompt or finish in GigaEdit. Seedance-class video models may include synced audio — still plan a voiceover pass for brand clarity.

Keep sourceImageUrl / ?source= edit links for iterative design (poster → variant → final).

8. Asset hygiene

Name files by campaign (brand_hook_v3.mp4). Store covers at marketplace-friendly 16:9. Export a still frame for link previews. Back up finals outside the browser. Never upload national ID scans into Media Studio or GigaSocial — verification has its own secure path (Series 4).

9. Series 2 checklist

- ☐ Generate one image in Media Studio and save it
- ☐ Open GigaEdit, apply aspect crop, export
- ☐ Record a short clip with teleprompter
- ☐ Complete Post to GigaSocial handoff once
- ☐ Confirm the composer received media

Next: Series 3 — GigaSocial Creator Playbook (GHS 150.00).
